

Updating your SwitchIndex Database

Windows

Configure automatic updates

You can configure USBKeys 2 to periodically check the SwitchIndex website and download updates:

1. Open USBKeys 2.
2. Open the Options menu and select Options.
3. Set the Database Update to check never, once a week or once a month.

Run update now

1. Open USBKeys 2.
2. Open the Applications menu and select Download Database Update.
3. Restart USBKeys 2.

Manual update

If the computer you want to update does not have Internet access, or you're experiencing problems downloading updates, please download the file below and run the installer:

<http://www.switchindex.com/download/USBKeys2DB.EXE>

NOTE: Only use this if updating through the USBKeys 2 program does not work.

Mac

Configure automatic updates

You can configure USBKeys 2 to periodically check the SwitchIndex website and download updates:

1. Click on the USBKeys 2 icon in the menu bar and select 'Preferences'.
2. Set the Database Update to check never, once a week or once a month.

Run update now

1. Click on the USBKeys 2 icon in the menu bar and select 'Download Database Update'.
2. Restart USBKeys 2.

Manual update

If the Mac you want to update does not have Internet access, or you're experiencing problems downloading updates, please download and extract the archive below. Installation instructions are included.

<http://www.switchindex.com/download/USBKeys2MacDBUpdate.zip>

NOTE: Only use this if updating through the USBKeys 2 application does not work.
